Introduction to boundary layer meteorology

Contents

	Preface	xi
1	**Mean Boundary Layer Characteristics**	1
1.1	A Boundary-Layer Definition	2
1.2	Wind and Flow	3
1.3	Turbulent Transport	4
1.4	Taylor's Hypothesis	5
1.5	Virtual Potential Temperature	7
1.6	Boundary Layer Depth and Structure	9
1.7	Micrometeorology	19
1.8	Significance of the Boundary Layer	21
1.9	General References	23
1.10	References for this Chapter	25
1.11	Exercises	26
2	**Some Mathematical & Conceptual Tools: Part 1. Statistics**	29
2.1	The Significance of Turbulence and Its Spectrum	29
2.2	The Spectral Gap	33
2.3	Mean and Turbulent Parts	33
2.4	Some Basic Statistical Methods	35
2.5	Turbulence Kinetic Energy	45
2.6	Kinematic Flux	47
2.7	Eddy Flux	51
2.8	Summation Notation	57
2.9	Stress	63
2.10	Friction Velocity	67
2.11	References	68
2.12	Exercises	70

Scanned by CamScanner

3 Application of the Governing Equations to Turbulent Flow 75

3.1 Methodology 75
3.2 Basic Governing Equations 76
3.3 Simplifications, Approximations, and Scaling Arguments 76
3.4 Equations for Mean Variables in a Turbulent Flow 80
3.5 Summary of Equations, with Simplifications 87
3.6 Case Studies 93
3.7 References 97
3.8 Exercises 110
111

4 Prognostic Equations for Turbulent Fluxes and Variances 115

4.1 Prognostic Equations for the Turbulent Departures 115
4.2 Free Convection Scaling Variables 117
4.3 Prognostic Equations for Variances 120
4.4 Prognostic Equations for Turbulent Fluxes 134
4.5 References 147
4.6 Exercises 148

5 Turbulence Kinetic Energy, Stability and Scaling 151

5.1 The TKE Budget Derivation 151
5.2 Contributions to the TKE Budget 153
5.3 TKE Budget Contributions as a Function of Eddy Size 166
5.4 Mean Kinetic Energy and Its Interaction with Turbulence 168
5.5 Stability Concepts 169
5.6 The Richardson Number 175
5.7 The Obukhov Length 180
5.8 Dimensionless Gradients 183
5.9 Miscellaneous Scaling Parameters 184
5.10 Combined Stability Tables 186
5.11 References 187
5.12 Exercises 189

6 Turbulence Closure Techniques 197

6.1 The Closure Problem 197
6.2 Parameterization Rules 200
6.3 Local Closure — Zero and Half Order 202

Scanned by CamScanner

6.4	Local Closure — First Order	203
6.5	Local Closure — One-and-a-half Order	214
6.6	Local Closure — Second Order	220
6.7	Local Closure — Third Order	224
6.8	Nonlocal Closure — Transilient Turbulence Theory	225
6.9	Nonlocal Closure — Spectral Diffusivity Theory	240
6.10	References	242
6.11	Exercises	245

7 Boundary Conditions and Surface Forcings 251

7.1	Effective Surface Turbulent Flux	251
7.2	Heat Budget at the Surface	253
7.3	Radiation Budget	256
7.4	Fluxes at Interfaces	261
7.5	Partitioning of Flux into Sensible and Latent Portions	272
7.6	Flux To and From the Ground	282
7.7	References	289
7.8	Exercises	292

8 Some Mathematical & Conceptual Tools: Part 2. Time Series 295

8.1	Time and Space Series	295
8.2	Autocorrelation	296
8.3	Structure Function	300
8.4	Discrete Fourier Transform	303
8.5	Fast Fourier Transform	310
8.6	Energy Spectrum	312
8.7	Spectral Characteristics	318
8.8	Spectra of Two Variables	329
8.9	Periodogram	335
8.10	Nonlocal Spectra	336
8.11	Spectral Decomposition of the TKE Equation	340
8.12	References	342
8.13	Exercises	344

9 Similarity Theory 347

9.1	An Overview	347
9.2	Buckingham Pi Dimensional Analysis Methods	350

Scanned by CamScanner

9.3 Scaling Variables
9.4 Stable Boundary Layer Similarity Relationship Lists 354
9.5 Neutral Boundary Layer Similarity Relationship Lists 360
9.6 Convective Boundary Layer Similarity Relationship Lists 364
9.7 The Log Wind Profile 368
9.8 Rossby-number Similarity and Profile Matching 376
9.9 Spectral Similarity 386
9.10 Similarity Scaling Domains 389
9.11 References 394
9.12 Exercises 395
399

10 Measurement and Simulation Techniques 405

10.1 Sensor and Measurement Categories 405
10.2 Sensor Lists 407
10.3 Active Remote Sensor Observations of Morphology 410
10.4 Instrument Platforms 413
10.5 Field Experiments 417
10.6 Simulation Methods 420
10.7 Analysis Methods 427
10.8 References 434
10.9 Exercises 438

11 Convective Mixed Layer 441

11.1 The Unstable Surface Layer 442
11.2 The Mixed Layer 450
11.3 The Entrainment Zone 473
11.4 Entrainment Velocity and Its Parameterization 477
11.5 Subsidence and Advection 483
11.6 References 487
11.7 Exercises 494

12 Stable Boundary Layer 499

12.1 Mean Characteristics 499
12.2 Processes 506
12.3 Evolution 516
12.4 Other Depth Models 518
12.5 Low-Level (Nocturnal) Jet 520

Scanned by CamScanner

12.6 Buoyancy (Gravity) Waves 526
12.7 Terrain Slope and Drainage Winds 534
12.8 References 538
12.9 Exercises 542

13 Boundary Layer Clouds 545

13.1 Thermodynamics 545
13.2 Radiation 555
13.3 Cloud Entrainment Mechanisms 558
13.4 Fair-weather Cumulus 562
13.5 Stratocumulus 570
13.6 Fog 576
13.7 References 578
13.8 Exercises 583

14 Geographic Effects 587

14.1 Geographically Generated Local Winds 587
14.2 Geographically Modified Flow 595
14.3 Urban Heat Island 609
14.4 References 613
14.5 Exercises 617

Appendices 619

A. Scaling Variables and Dimensionless Groups 621
B. Notation 629
C. Useful Constants, Parameters and Conversion Factors 639
D. Derivation of Virtual Potential Temperature 645
