Ex. 2º Brainerd, W. S.
Guide to Fortran 2003 programming

 Springer

Contents

1	Introduction to Programming in Fortran	1
1.1	Programs that Calculate and Print	1
1.2	Intrinsic Data Types	4
1.3	Variables and Input	11
1.4	The Form of a Fortran Program	18
1.5	Some Intrinsic Functions	20
1.6	Expressions and Assignment	24
1.7	Introduction to Formatting	28
1.8	Case Study: Quadratic Formula	33
1.9	Case Study: Debugging Pendulum Calculations	41
2	Control Constructs	45
2.1	Statement Blocks	45
2.2	The if Construct	45
2.3	The case Construct	58
2.4	The do Construct	62
3	Modules and Procedures	77
3.1	Modules	77
3.2	Procedures	80
3.3	Subroutines	81
3.4	Putting Procedures in a Module	82
3.5	Arguments	84
3.6	Functions	86

3.7	Pure Procedures and Side Effects	89
3.8	Argument Passing	90
3.9	Using a Function in a Declaration Statement	95
3.10	The return Statement	96
3.11	Scope	96
3.12	The save Attribute	97
3.13	Case Study: Numerical Integration	97
3.14	Case Study: Calculating Probabilities	99
3.15	Recursion	102
3.16	Case Study: Adaptive Numerical Integration	109
4	Arrays	115
4.1	Declaring and Using Arrays	115
4.2	Searching a List	131
4.3	Sorting	139
4.4	Selecting	144
4.5	Case Study: Solving Linear Equations	147
4.6	Case Study: Calculating Probabilities	152
5	Character Data	155
5.1	Use of Character Data in Fortran Programs	155
5.2	Text Analysis	169
5.3	Case Study: Expression Evaluation	183
6	Structures and Derived Types	191
6.1	Structures	191
6.2	Derived Types	192
6.3	Declaring and Using Structures	195
7	IEEE Arithmetic and Exceptions	201
7.1	Numerical Representations	201
7.2	NaN and Inf	202
7.3	Exceptions	205

8	More about Procedures	207
8.1	Date and Time Subroutines	207
8.2	Command-Line Arguments	209
8.3	Generic Procedures	209
8.4	Elemental Procedures	212
8.5	More Array Intrinsic Procedures	214
8.6	Bit Intrinsic Procedures	216
8.7	Calling C Procedures	218
9	Extending Fortran	223
9.1	Extending Assignment	223
9.2	Extending Operators	225
9.3	User-Defined Operators	227
9.4	Extending Intrinsic Functions	227
9.5	Derived-Type Editing	229
9.6	Computing with Big Integers	231
10	Pointer Variables	245
10.1	The Use of Pointers in Fortran	245
10.2	Case Study: Solving a Heat Transfer Problem	252
10.3	Linked Lists	254
10.4	Trees	262
11	Input and Output	269
11.1	Records	270
11.2	Files	272
11.3	Data Transfer Statements	279
11.4	The open Statement	290
11.5	The close Statement	293
11.6	The inquire Statement	294
11.7	File Positioning Statements	299
11.8	Formatting	301

12	Object-Oriented Programming	315
12.1	Extended Data Types	315
12.2	Polymorphism	317
12.3	Type-Bound Procedures	318
12.4	Case Study: Traffic Queues	319
A	Intrinsic Procedures	327
A.1	Intrinsic Functions	327
A.2	Elemental Intrinsic Procedures	327
A.3	Positional Arguments or Argument Keywords	328
A.4	Argument Presence Inquiry Function	328
A.5	Numeric, Mathematical, Character, and Logical Procedures	328
A.6	Numeric Manipulation and Inquiry Functions	331
A.7	Bit Manipulation and Inquiry Procedures	332
A.8	Array Intrinsic Functions	333
A.9	Pointer Nullify and Association Status Inquiry Functions	336
A.10	Type Extension Inquiry Functions	336
A.11	Date and Time Subroutines	336
A.12	Pseudorandom Numbers	337
A.13	Transfer Procedures	337
A.14	Testing Input/Output Status	337
A.15	Command Line Manipulation	337
B	Fortran Language Forms	339
Index		347
